Application Control Manager Release PV9.1.0 SV1.0.0

The theme for this Major release is enhancements and bug fixes.

New Features

- Application Control Manager now supports the Alias property introduced in the OneStream Platform version 9.1.0. With the Alias property, you can add display names for members, improving navigation and data comprehension in the Dimension Library. (MP4-5766)

> **IMPORTANT:** Application Control Manager PV9.1.0 SV1.0.0 includes a database schema update to support the new Alias property. After upgrading, please check your Metadata Import connectors and update them if needed. We recommend re-saving the connectors once to ensure the update is applied.

Enhancements

- Application Control Manager KPIs reflect updated styling according to OneStream Design principles. (MP4-6301)

Fixed Issues

- Special characters in user names cause an error in the Extract configurations. As a work-around, switch to a user without special characters in the user name to extract. (MP4-3804)
- After deleting the Default Email Template, you can create a new Request Profile with a duplicate template. (MP4-4579)
- Move line items generated by the Metadata Import process now displays the Current Parent value correctly in the Request Detail. (MP4-5802)
- After exporting a dimension that includes a None member, the correct sort order displays. (MP4-5885)
- Administrators can commit, reject, and push back approved requests. (MP4-5897)
- You can import Excel spreadsheets after saving by using Save As File on Local Folder. (MP4-6044)
- The Position in Parent is retained for Copy and Move actions. (MP4-6059)
- Cross-entity relationship properties are carried over when members are copied. (MP4-6258)
- The Create All function in a Security Request Profile works as expected. (MP4-6259)
- The contents of the Parent Name field when using the ACM_copy_move Member Under Parent action in an SSI file is retained in the member filter of the request. (MP4-6324)
- In Metadata Import, incoming data is case insensitive. Application Control Manager recognizes members with inconsistent casing as the same member. (MP4-6457)
- Request profiles that have open or closed requests associated with them cannot be deleted. (MP4-6473)

- Members in the Orphan node are copied correctly when completing requests in the Dimension Library. See Layout Actions. (MP4-6508)
