Release PV8.0.0 SV211

The theme of this Hotfix release is a documentation update to the *SAP Connector Guide*.

Upgrade

- This release supports a reinstall over the existing installation. Reach out to your OneStream Software representative for questions regarding this process. Reinstalling over the existing application may affect existing Web API endpoint configurations. You can verify endpoint authentication links in the Services dashboard.
- OneStream recommends uninstalling the UI for SAP Connector before installation.

Compatibility

- This release requires a minimum 8.0 Platform release.

Documentation

- The "DLL Setup for RFC Connections" section of the *SAP Connector Guide* was updated to reflect where DLLs should be placed when setting them up for ERPConnect. See "DLL Setup for RFC Connections" in the *SAP Connector Guide*.

Release PV8.0.0 SV210

The theme of this Minor release is bug fixes and UI enhancements.

New Features

- In the Services dashboard you can now perform the following actions:
 - Test your Web API Services connections using the Test button.
 - Select the authentication for your service on the API Services List table using the new Authentication column drop-down menu. (MP3-6983)

Enhancements

- Streamlined button terminology across RFC and Web API connections to ensure a cohesive user experience. (MP3-6487)

Fixed Issues

- A Web API Timeout Limit (sec) field was added to Security Settings to replace the default timeout of 100 seconds, eliminating the risk for timeouts and ensuring your data is successfully pulled. (MP3-6943)
- Web API skip token retrieval when performing workflow load and transform. (MP3-6966).
- You can save RFC Connection passwords, Web API API Key, Password, and Client Secret fields with 24 or more characters. (MP3-6911)

- You can preview SE37 Connectors without entering export parameters in the Create or Edit SE37 Connector dialog boxes. (MP3-6802)

Upgrade

- This release supports a reinstall over the existing installation. Reach out to your OneStream Software representative for questions regarding this process. Reinstalling over the existing application may affect existing Web API endpoint configurations. You can verify endpoint authentication links in the Services dashboard.
- OneStream recommends uninstalling the UI for SAP Connector before installation.

Compatibility

- This release requires a minimum 8.0 Platform release.

Documentation

- Security Settings in the *SAP Connector Guide* was updated to include information on the Web API Timeout Limit (sec) setting. See "Security Settings" in the *SAP Connector Guide*.
- Images in the guide have been updated to reflect the streamlined button terminology.
- The Web API Services section was updated to reflect the new Authentication column and the test services functionality.

Release PV8.0.0 SV200

The theme of this release is new functionality and enhancements. This release supports connection to S4 HANA systems using OData V2. See [OData V2 APIs](#).

Prerequisites

- This release requires a minimum 8.0 Platform release.
- This release does not support an reinstall over the existing installation. You must uninstall the UI for SAP Connector before installation. Any modifications to settings must be redone.

New Features

- A dynamic sidebar will appear when creating a new connection or editing an existing connection. Use this sidebar to walk through each step required to form a successful connection. (MP3-6047, MP3-6095, MP3-6096)
- Use substitution variables in the Query Options tab to further utilize dynamic values. (MP3-6105, MP3-6281)
- A pop-up message will populate when attempting to save a connection with required fields not filled out, prompting the fields to be entered before saving. (MP3-6247)

Enhancements

- Terminology in the solution was modified to create a more consistent user experience. (MP3-6344)

Fixed Issues

None

Known Issues

- SPC Connections do not work when reinstalling over the existing software. You must run an Uninstall UI to use SAP Connector. (MP3-5916)

Release PV8.0.0 SV103

The theme of this release is new functionality.

Prerequisites

- This release requires a minimum 8.0 Platform release.

New Features

- Admins can set timeout limits for the SIC gateway so large queries only run for the set amount of time.

Enhancements

None

Fixed Issues

None

Known Issues

None

Release PV8.0.0 SV102

The theme of this release is a bug fix.

NOTE: Only the Release Notes were updated for this release. The SAP Connector Guide has not been updated except to change the release number and copyright if needed.

Prerequisites

- This release requires a minimum 8.0 Platform release.

New Features

None

Enhancements

None

Fixed Issues

- Create Connector Objects when connecting to the BW MDX Connector without receiving an error message. (MP3-5250)

Known Issues

None

Release PV8.0.0 SV101

The theme of this release is bug fixes.

NOTE: Only the Release Notes were updated for this release. The SAP Connector Guide has not been updated except to change the release number and copyright if needed.

Prerequisites

- This release requires a minimum 8.0 Platform release.

New Features

None

Enhancements

None

Fixed Issues

- Successfully search for SAP queries when the User Area field is set to LocalArea. (MP3-5010)
- There is no character limit when you enter the fields you want to retrieve while creating or editing a table connection. (MP3-5079)

Known Issues

None

Release PV8.0.0 SV100

This is the initial release of the SAP Connector and documentation for installation guidance.

Prerequisites

- This release requires a minimum 8.0 Platform release.

Known Issues

None
