SAP Connector Release PV8.4.0 SV110

The theme of this minor release are new features and bug fixes.

New Features

- To avoid potential timeout limits when creating a Web API Authentication using an SIC Connection, you can now use a Database Connection instead of Direct Connection. Timeout limits can be set in General Settings for Web API Authentication connections. (MP3-7825).
- You can now specify how your client ID and secret credentials are sent using the Authentication Method drop-down when creating an OAuth 2.0 Web API authentication, ensuring a successful authentication. (MP3-8288)
- When creating a Web API Authentication with a Smart Integration Connection, you can choose whether your request is retrieved using http or https using the Is Service HTTPS setting. (MP3-8322)

Fixed Issues

- When creating Web API endpoints using custom query options, in the last step, you can select parameters. (MP3-8052)
- The solution correctly parses resource paths from OData V4 metadata XML files that contain parameters. (MP3-7940)

Known Issues

- When building your Datasphere query using the SQL Query Builder, Platform version 8.4 stacks conditions on top of one another rather than below. This Platform behavior will not change. To avoid this issue while using SAP Connector, we recommend upgrading to Platform Version 8.5 where the SQL Query Builder behaves as expected.

Upgrade Information

- This release supports a reinstall over the existing installation. Reach out to your OneStream Software representative for questions regarding this process. Reinstalling over the existing application may affect existing Web API endpoint configurations. You can verify endpoint authentication links in the Services dashboard.
- OneStream recommends uninstalling the UI for SAP Connector before installation.

Compatibility

- This release requires a minimum 8.4 Platform release.

Documentation

- The *SAP Connector Guide* was updated to reflect these changes:
    - Release number
    - New Web API SIC Remote Gateway Job Timeout Limit in General Settings.
    - Steps for choosing a Database Connection when creating new Web API Authentications using an SIC Connection.

- The solution Help icon prompts a dialog where you can access online help documentation. (MP3-7856)

SAP Connector Release PV8.4.0 SV100

The theme of this Major release is new functionality.

Highlights

- SAP Connector now supports OData V4.
- Connect to SAP Datasphere and quickly write SQL queries using the new SQL Query Builder.

New Features

- Connect to and query from Datasphere using SAP Connector's new Query Builder. The builder guides you through the SQL writing process or you can optionally choose to write your queries manually. (MP3-6741, MP3-6743, MP3-6747, MP3-6847, MP3-6745)
- You can connect to SAP Connector using OData V4. (MP3-6509)
- When managing connector objects, you can now specify the scenario type for the object. (MP3-7338)

Enhancements

- Before deleting a Web API Endpoint Connector, the confirmation dialog box now displays the name of the connector to ensure you selected the correct one to delete. (MP3-6490)
- Solution help icon now prompts a dialog where you can access online help documentation. (MP3-7581)

Known Issues

- When building your Datasphere query using the SQL Query Builder, Platform version 8.4 stacks conditions on top of one another rather than below. This Platform behavior will not change. To avoid this issue while usingSAP Connector, we recommend upgrading to Platform Version 8.5 where the SQL Query Builder behaves as expected.

Upgrade Information

- This release supports a reinstall over the existing installation. Reach out to yourOneStream Softwarerepresentative for questions regarding this process. Reinstalling over the existing application may affect existing Web API endpoint configurations. You can verify endpoint authentication links in the Services dashboard.
- OneStreamrecommends uninstalling the UI forSAP Connectorbefore installation.

Compatibility

- This release requires a minimum 8.4 Platform release.

Documentation

- The SAP Connector Guide was updated to reflect these changes:
    - Release number
    - New Datasphere functionality
    - SAP product compatibility and support information for RFC, Web API, and Datasphere connections.
